Abstract (en)
[origin: WO2008000616A2] Disclosed is a static mixer (1) comprising at least one couple of blades (2; 2a, 2b) for generating an angular momentum (300) in the direction (30) of a duct flow (3). Leading edges of the blades located on the inflow side extend perpendicular to the duct flow and parallel to a height of the duct (10). Flow-impinged surfaces that are arranged downstream of the leading edges are bent in a concave manner and in opposite directions. Each blade (2a, 2b) is embodied as an aerodynamically designed member encompassing a front wall (20), a convex sidewall (21) and a concave sidewall (22). The front wall has a convex shape or a shape of a flow-impinged edge. Particularly the blade cross-sections extending perpendicular to the sidewalls have shapes similar to cross-sections of aircraft wings.
