Abstract (en)

[origin: WO2008007894A1] The present invention relates to a wet towel manufacturing apparatus, which can supply a disposable wet towel offhand, which can be formed by cutting a dry non- woven fabric of a dry non- woven fabric roll into a given length, impregnating the cut dry non- woven fabric with water, and rolling or folding into several layers while feeding the dry non- woven fabric. The fabric- cutting part 14 of the wet towel manufacturing apparatus 1 of the invention has a first cutting edge 62 and a second cutting edge 72 that are gradually adapted to come into contact with each other from one side thereto to the other side thereof along the width direction of the fabric in such a manner as to be engaged with each other, which can further extend the lifespan of the edges and can carry out the fabric-cutting operation more effectively.
