Abstract (en)
[origin: WO2007134703A1] The invention relates to a motorcycle with a bifurcated wheel bearer (2) with a front wheel (7) mounted on its bottom, a handle bar (11) by means of which the wheel bearer is steered in the steering directions left and/or right during a journey, a transmission device (13-16) via which the handle bar (11) is coupled with the wheel bearer (2), wherein the transmission device (13-16) is intended for transmitting steering forces introduced into the handle bar to the wheel bearer (2) to bring it into the appropriate steering position. The wheel bearer (2) can pivot relative to the handle bar (11) so that the wheel bearer (2) can be moved at least to some extent in the steering direction relative to the handle bar (11), for a given handle bar (11) position.
