Abstract (en)

[origin: WO2008000593A1] It should be possible to provide drums (2) with a larger variety of functional parts (5), (18) without considerably limiting flexibility in production and increasing the warehousing expenses. In addition, it should be possible in production to respond quickly and without problems to short-term market-related requirements. The implementation of the invention, and the advantages achievable thereby, should be possible at low costs. These objectives are achieved by a particularly advantageous modular system for drums (2) of laundry treatment machines (1) - differentiated by the types thereof in washing machines, dryers and washer-dryers, wherein the drums (2) comprise base bodies (10) and functional parts (5, 18), such as laundry carriers (3) or the like, and wherein identical drums (2) are provided for different types of laundry treatment machines (1) of one type in the connecting area to the functional parts (5), (18), wherein with the drums at least two sets of functional parts (5), (18) are associated, which in the connecting area are all identical to one another and mutually interchangeable.
