Abstract (en)

[origin: WO2008006416A1] The invention relates to an RFID transponder, an optical element (150) with an RFID transponder, and an aerial (110) for an RFID transponder. According to the invention, the aerial (110) is constructed to be optically transparent. The invention additionally relates to a method for producing an aerial (110) for an RFID transponder. The inventive method for producing an aerial (110) of an RFID transponder is characterized by the following procedural steps: a) Providing an object (150) to be equipped with the RFID transponder with a surface, b) Application of a transparent conductive coating to the surface, c) Lithographic structuring of the transparent conductive coating in order to form the aerial (110).
