Abstract (en)

[origin: WO2008010722A1] A system for storage and delivery of product units from a storage facility (14) is described, where the system comprises a number of compartments, where the respective compartments hold a number of units arranged after each other, and also a release mechanism for delivery of the product units, and it is characterised in that the release mechanism comprises a first blocking body (28,128) set up to be readjusted from a holding position to a release position for the foremost product unit (12') in the row of products when the release mechanism is activated, and also a second blocking body (25,125) set up to be readjusted from a release position to a holding position for the other product units (12) when said release mechanism is activated. Also described are a method and applications of the system.
