Abstract (en)  
[origin: WO2008006385A1] A connection pot (10) is provided for accommodating, making contact with and sealing a switch assembly (11), which has a closed housing (12) comprising a housing lower part (14) and a housing upper part (15) and a temperature-dependent switching mechanism (16), which is arranged in the housing (12) and, as a function of its temperature, produces an electrically conductive connection between two stationary contacts (17, 18) provided on the housing (12). A mating contact (21, 22) is provided on the inside on the connection pot (10) for each of the stationary contacts (17, 18), each of which mating contacts is connected to an external connection (23) provided on the outside on the connection pot (10).
