Abstract (en)

[origin: WO2007144010A1] The invention relates to a method for monitoring a hearing device (10, 110) comprising an electroacoustic output transducer (18, 118) worn at a user's ear or in a user's ear canal, the method comprising: measuring the electrical impedance of the output transducer (18, 118); analyzing the measured electrical impedance of the output transducer (18, 118) in order to evaluate the status of the output transducer (18, 118) and/or of an acoustical system (20, 120) cooperating with the output transducer (18, 118); and outputting a status signal representative of the status of the output transducer (18, 118) and/or of the acoustical system (20, 120) cooperating with the output transducer (18, 118).
