Abstract (en)
[origin: EP2039265A1] A reclining seat structure is provided, which is comfortable to sit on without the dislocation of a user's back with regard to the reclining portion in use and is easy to recline and convenient to install and use as well as being highly endurable. (MEANS TO SOLVE THE ISSUES) The reclining seat structure comprises a seat cushion portion; a backrest cushion portion foldabley connected to the seat cushion portion; a base on which those portions are movably supported; and a bell crank connected slidably in a vertical direction to the back frame of the backrest cushion portion, an intermediate link portion formed on a lower part of which crank is swingably supported around a raised support portion of the base, wherein the rear end portion of the seating frame and the lower end portion of the bell crank are pivotally connected and the seat cushion portion moves to and fro on the base.
