Abstract (en)
[origin: EP2039335A1] The wheelchair has a seat (2) on a chassis (29) and pivoted from a horizontal seating position to a vertical standing position during upright motion. A footrest (16) is arranged on the chassis, and is lowered to ground in the standing position. The footrest is inclined at an angle relative to a horizontal when the seat is in the seating position, where the angle becomes zero during upright motion. The footrest is housed telescoping in a guide tube (9), and forms a foot support unit (169) articulated to a spring-loaded reversing lever arranged pivotably on a seat column (22).
