Abstract (en)

[origin: EP2039894A2] The device (1) comprises a functional element (2) of an internal combustion engine. A carrier (3) is fastened with a number of fastening elements (4) on a support structure on or in the internal combustion engine. A connection between the functional element and carrier is formed on a wall (5). The wall is made of elastomeric material or rubber material. The wall runs parallel to a support section (6) of the carrier. An air gap (7), running parallel to the wall and the support section, is provided between the wall and the support section.
