Abstract (en)

[origin: WO2008009034A1] The invention relates to a device (1) for massaging the jaw or cleaning the teeth of a baby, said device comprising a handle (2) and a plate-shaped bite part (3) which is curved in such a way that it essentially corresponds to the curved shape of the jaw. Said bite part (3) comprises massage or cleaning projections (5) on at least one broad side and consists of a material which is softer than that of the handle (2). The handle (2) and the bite part (3) are interconnected in a nondetachable manner. The invention also relates to methods for producing one such device (1).
