Abstract (en)

[origin: WO2008009583A1] The invention relates to an electric vacuum cleaner (S) with a basic device (1) and an attachment (3), a joint-like connection being provided between the basic device (1) and the attachment (3) for the pivotable movement of the basic device (1) transversely to a conventional travel direction (r) between a parked position in which the vacuum cleaner (S) automatically stands by means of the attachment (3) and a working position, in which, because of the movement, there is a changing angular alignment between the basic device (1) and the attachment (3), the parked position being secured by a catch (20) that can be overcome manually, characterized in that the catch (20) is provided by a magnetic attachment between the basic device (1) and the attachment (3).
