Abstract (en)

[origin: WO2007149490A1] This invention provides processes of purifying and recovering trimers of a retroviral envelope (Env) protein from a preparation comprising trimers of the retroviral Env protein and high molecular weight aggregates thereof. Non-ionic detergent is used in the processes to obtain a purified trimer product, which is separated from aggregates. The process further comprises treating the preparation with a non-ionic detergent so as to thereby convert the high molecular weight aggregates into trimers, and purifying and recovering the trimers from the preparation so treated.
