Abstract (en)  
[origin: WO2008006996A1] The invention relates to a method of manufacturing an automotive vehicle, the vehicle comprising at least one chassis (2), body elements (20, 22) made of a first material, and at least one body element (24) made of a second material different from the first, the body elements (20, 22, 24) being capable of being attached to the chassis (2) in respective final positions. The method comprises the following successive steps: mounting body elements (20, 22, 24) on the chassis (2); painting the body elements (20, 22, 24); baking the paint deposited on the body elements (20, 22, 24). Before the painting step, the body element made of the second material (24) is mounted on the chassis (2) in a temporary position by means of a support (36) attached to the chassis (2), the body element made of the second material (24) being mounted on the chassis (2) in its final position after the baking step.
