Abstract (en)
[origin: WO2008003517A1] The invention relates to a water-soluble salt core for producing hollow patterns by casting methods, wherein the salt core comprises at least one mechanical and/or electric/electronic component in a positive connection or in a functional cavity, the component after the casting process being completely or partially displaceably or flexibly connected to the hollow pattern, or wherein the salt core comprises at least one mechanical and/or electric/electronic component in a positive connection or in a functional cavity, the component being substantially or completely enclosed by the salt core, or wherein the salt core comprises at least one mechanical and/or electric/electronic component in a positive connection or in a functional cavity, the component exercising no support function for the core.
