Abstract (en)
[origin: WO2008000329A1] An adjusting device for the alignment, particularly for the angular alignment, of a rod-shaped object, particularly a pole or a post, relative to a sleeve in which the rod-shaped object can be inserted at least partially, particularly relative to a ground sleeve and/or a ground dowel, comprises a first adjustable holding device, which can be used to adjust the position of the rod-shaped object relative to the sleeve in a first plane, and a second adjustable holding device, which can be used to adjust the position of the rod-shaped object relative to the sleeve in a second plane which differs from the first plane.
