Abstract (en)
[origin: WO2008006129A1] The invention relates to an apparatus (1) for slidable mechanisms, such as sliding gates or sliding doors. In order to permit a compact and nevertheless stable construction of the apparatus (1), it is provided according to the invention that the apparatus (1) has a supporting and retaining element (2) and a shorter running rail (3) and also a longer running rail (4), wherein rolling elements (5) and/or sliding elements, via which the shorter running rail (3) is movable, are provided on the supporting and retaining element (2), and wherein further rolling elements (6) and/or sliding elements, via which the longer running rail (4) is movable, are provided on the shorter running rail (3) and, if appropriate, on the supporting and retaining element (2).
