Abstract (en)

[origin: WO2008006817A1] The invention relates to method for the detection of at least one moving object (1) in a pre-determined detection range (ZD) by means of a speed sensor (2), comprising the following steps: determining a detection range (ZD) within an illumination region (ZL) of the speed sensor (2); detecting a speed signal, particularly a Doppler signal, at least with the entry of a moving object (1) into the illumination region (ZL); estimating an entry of the moving object (1) into the detection range (ZD) on the basis of a speed (V; Vr) of the object (1), and of a distance (d) between a boundary (dl; d4) of the illumination region (ZL) and the detection range (ZD).
