Abstract (en)

[origin: EP1881386A1] The method involves determining an actual emission value of an emission producing system, and projecting an expected emission value based on the determined emission value. The expected emission value is compared with an assigned emission law and the comparison is evaluated as a basic for regulating the system. An early warning is generated by a status light and is transmitted over a wireless remote transmission, where the early warning displays a deficit of the emission law under a predefined threshold value. An independent claim is also included for a device for monitoring an emission state in an emission producing system.
