Abstract (en)

[origin: WO2008003840A1] Method of communication between a calling terminal and a called terminal, this method comprising a step of receiving through a server a request to set up a communication originating from the calling terminal, this request comprising location data for the calling terminal, this method being characterized in that it comprises: the establishing of a list of events that have occurred, since a predetermined time, in a perimeter corresponding to the estimated location of the calling terminal; the despatching to the calling terminal of this list of events. Server, network and computer program product allowing the implementation of such a method.
