Abstract (en)
[origin: WO2008006978A2] The invention relates to a terminal for viewing digital images, consisting of: a screen for displaying a digital image, surrounded by a frame; and an electronic board including a circuit providing a connection to a telecommunication network, a data memory for storing digital image data received and a processing means for presenting the stored digital image data on the screen and, in this way, displaying the digital image. The invention is characterised in that the circuit includes a controlled processor for processing the transport layers of the TCP/IP protocol and editing the digital images without using Web browser client HTTP software, said circuit also including a modulator/demodulator and an interface for accessing an RTC telecommunication network.
