Abstract (en)
[origin: EP2042382A2] The roll-over protection system has a horizontal carrier (1). The horizontal carrier is arranged transverse to a longitudinal axis of a vehicle. The horizontal carrier is connected with a vehicle body on one side of connection nodes (2). The horizontal carrier has a rollover element (4) extended from a resting position into a working position by a drive unit (3). The rollover element is detachably fixed by a mounting (5). A locking system comprises extending elements, which are fastened on an outside of the rollover element, and are connected with connection nodes.
