Abstract (en)
[origin: EP2042706A2] The arrangement has an exhaust gas turbocharger supported by a holding device at an internal-combustion engine. Medium-conducting channels e.g. coolant and lubricant channels, are provided for cooling water and lubricant and run between the exhaust gas turbocharger and an internal-combustion engine. The holding device is formed by rigid pipelines (24, 26, 28, 30) e.g. supply lines and return lines, of a pipeline combinations (20, 22), where the pipelines form the channels. The pipelines are connected by connecting flanges (32, 34) with the engine and to a bearing case of the turbocharger.
