Abstract (en)
[origin: EP2042804A2] The device (1) includes a projector (2), a casing (3) that houses electronic equipment in its interior, and an adapter (4) that has a top area (4a) of connection for its insertion inside the rail (5) which allows for the projector sliding along said rail, and a lower area (4b) attached to the projector device (1), so that, in operation, the projector device (1) is suspended from the rail (5) by means of said adapter (4) and can be arranged along it. The adapter (4) is completely concealed in its mounted position, where its lower area (4b) is housed in said casing (3), and can be moved longitudinally in relation to said casing (3) between said mounted position and a removal position, where the lower area (4b) of the adapter (4) is not housed in the casing (3). The device (1) includes automatic actuation means (6) for the longitudinal movement of said adapter (4) in relation to said casing (3) from the mounted position to the removal position.
