Abstract (en)
[origin: EP2042811A1] The inventive telescopic rail system for the ovens comprises a pair of fixed rails (1) which are reciprocally fitted on the side walls inside the oven, a pair of movable rails (2) on these rails (1) which can move towards the inside and the outside of the oven and parallel to each other and a mounting wire (3) which connects the movable rails (2) to each other and allows them to move together. The mounting wire (3) has an integral structure and its side portions (6) are fitted on the catches (5) located on the surfaces of the movable rails (2) facing each other as tight engagement by pressing them from top to bottom. On the front portion of the mounting wire (3), there is provided a holder (7) which is created through bending it downwards.
