Abstract (en)
[origin: WO2008006619A1] The invention relates to a manually manageable device for the application of adhesive with a housing (10; 30) designed to contain solid agents that liquefy coactive, preferably pen- or rod-shaped adhesive elements, by means of electrical heat, which housing has a discharge opening (18; 32) at the end side for discharging the liquefied adhesive, with the housing designed elongated and pen-shaped in such a way that it can be directed manually like a pen to apply adhesive to an adhesive application target external to the housing.
