Abstract (en)

[origin: WO2009013271A1] At least one satellite image of a container crane system is created with a resolution which can be predetermined to automatically make available cartographic data in a container crane system. The order of containers in the features describing the container crane system is extracted from the satellite image by means of a pattern recognition method. A container crane system-specific topographical map is generated from the extracted features. Said map is made available for at least one control unit of the container crane system, which unit is assigned to at least one transport device.
