Abstract (en)

[origin: WO2008009464A1] The invention relates to thermoset molding materials composed of thermoplastically processable polyaminotriazine molding materials based on meltable polyaminotriazine ethers having molar masses of from 500 to 5000 and a thermally latent hardener comprising amines, weak acids, organic peroxides, free-radical scavengers and/or stabilizers in a proportion of from 0.01 up to 10% by mass based on the sum of the polyaminotriazine ethers. The invention likewise relates to a latent hardener for curing the thermoset molding materials, and to a process and to an apparatus for preparing the thermoset molding materials and to their use.
