Abstract (en)
[origin: WO2008011843A1] A measuring apparatus (10), in particular for measuring current, is provided, having a sensor (40) and an evaluation device (42) which is coupled or can be coupled thereto, in which said coupling is effected contactlessly, in particular by means of a transponder interface (44, 46), so that on the one hand current can be measured in a reaction-free manner, wherein on the other hand the resulting measuring apparatus (10) can be used in a particularly flexible and versatile manner on account of the manoeuvrability of the components with respect to one another and on account of the relatively large possible distance between the two parts of the transponder interface (44, 46).
