Abstract (en)

[origin: WO2008009502A1] The invention relates to a device for charging a battery system (12) having a number of single voltage sources (14.1,...14.n) disposed in series connection via a voltage source (10). A bypass (18.1, 18.n) is associated with each of the single voltage sources (14.1,...14.n). Depending on the charging state of the single voltage sources (14.1, 14.n), the same are supplied with a charging current IL from the voltage source (10) via the bypass.
