Abstract (en)

[origin: EP2045077A2] The equipment has a blade bar (2) engaged to a roller (1), where the blade bar has a printing ink chamber (4) open to the roller and running along the blade bar. A deflection device is arranged in the printing ink chamber between a printing ink inlet (6) and a printing ink outlet for deflecting the printing ink along a direction of the roller. The side of the deflection device facing the roller is spaced apart from the roller in an engaged state of the blade bar. The deflection device has two deflection plates that are arranged adjacently on both sides of the printing ink outlet.
