Abstract (en)

A process for realising mosaics in ceramic material comprises stages of realising a support made of ceramic material, which includes fashioning on the in-view surface of the tile parts of surface which are not reciprocally coplanar; glazing the support, done by reproducing on said support a mosaic design such as to obtain a final required design for each tessera of the mosaic, and also designing division lines between the various tesserae; realising non-through incisions on the glazed surface of the support, done by making incisions which exactly follow the division lines between the tesserae.
