Abstract (en)

The process for realising mosaics in ceramic material comprises stages of realising a support made of ceramic material, which is performed by realising non-coplanar surfaces on an in-view surface of the tile, glazing the support, firing the glazed support, which is done in such a way as to reproduce on the support a design of a mosaic to be realised, such as to obtain a desired design of each tessera of the mosaic, and a design of division lines between the tesserae; realising non-through incisions on the glazed surface of the support, which is done by realising incisions exactly following the division lines between the tesserae.
