Abstract (en)
[origin: EP2045394A1] The area has a short grooved rail (3) for forming an upper boom with a recess. Another groove rail forms a lower boom with another recess. The rails are connected with one another in an area of recesses in a form-fit manner. A profile plate (14) is provided in a plate chamber that is formed between a rail head (16) and a rail base (8) of the grooved rail (3). The profile plate lies at a lower surface of the rail head and an upper side of the rail base such that a continuous solid profile is formed in the area of the profile plate along a vertical transverse direction of the rails.
