Abstract (en)

[origin: EP2045424A2] The device has a drive device e.g. electric motor drive such as linear motor, or an energy accumulator attached to a highly tiltable wall (1) such that the wall is drawn by the drive device or the energy accumulator into a horizontal guide rail (5) arranged in an upper area of a building e.g. garage, or a building part e.g. gable or swimming pool roofing. A Bowden cable (3) is attached on both sides of the wall, where ends of the cable are connected with the wall and the accumulator or the drive device, respectively.
