Abstract (en)
[origin: EP2045433A1] The connector (1) comprises a shell-type pin (10) in a middle area of longitudinal extension of the connector, where the pin points a direction of an open side of a U-profile. The height of the pin in a boundary lying transverse to the longitudinal direction of the connector is larger than in a middle region. A stopper (6) is arranged in a region of center of the extension of the connector. A resilient adjusting element (7) is provided in a region of the stopper. A floor space (2) comprises a through hole (8), where the connector is made of plastic.
