Abstract (en)

[origin: EP2045513A1] The device has a metallic core (2) comprising a longitudinal axis to confer mechanical resistance and comprising a hollow transversal section mast. A shell type rigid coating (4) entirely surrounds a periphery of a section of a core length and extends on a portion of the core length. The coating is made of material e.g. ductal(RTM: proprietary pre-mixed ultra-high performance concrete) material and comprises a mineral bond and fibers. A connection unit e.g. screw, is connected to the core, and a lighting unit is arranged at an upper end of the device.
