Abstract (en)

[origin: EP2045514A1] Reflective optical lighting system (1;100;200) comprising at least one light source (2) having a first optical axis (A) defining a main direction of radiation of light rays emitted by said source and at least a first and a second reflecting surface (3,4) operationally associated with the light source to intercept said light rays and arranged so as to form between them a first preset angle of a size other than 180°, wherein the first and second reflecting surfaces (3,4) between them delimit a concavity (5) oriented towards the light source and are shaped so that, when in use, said concavity receives a substantial portion of said light rays to reflect them in a direction forming with the first optical axis a second angle of a preset size, so that the reflected rays present a main direction of radiation defined by a second optical axis (B) approximately perpendicular to the first.
