Abstract (en)
[origin: WO2008012038A2] The invention proposes a pull-out guide (1) for guiding furniture parts, having a basic-structure rail (2) and a pull-out rail (3) as well as a central rail (4) which is mounted in a displaceable manner between the basic-structure and pull-out rails (2, 3). Bearing elements are arranged between the basic-structure rail (2) and the central rail (4) and between the pull-out rail (3) and the central rail (4). Also provided is a control bearing unit (10) which acts between the basic-structure rail (2) and the pull-out rail (3). According to the invention, the control bearing unit (12) comprises an elastic bearing body (14) and a comparatively hard bearing body (15). The pull-out guide (1) is designed such that the hard bearing body (15), in the pushed-in state of the pull-out guide (1), is not exposed to forces from at least one of the basic-structure and pull-out rails.
