Abstract (en)

[origin: FR2904250A1] The housing (101) with a roller-burnishing tool (100) having an adjustable width useful in crankshaft (50) rolling machine, comprises two parts separated at a distance from each other using an adjustable spacing unit, a centering unit, joggles for obtaining the spacer on two parts, and a fixing unit. The adjustable spacing unit comprises an interchangeable spacer against which a support captivates the parts of the housing. Each part of the housing comprises an interior side, where an interior of the housing is connected to a rolling wheel. The housing (101) with a roller-burnishing tool (100) having an adjustable width useful in crankshaft (50) rolling machine, comprises two parts separated at a distance from each other using an adjustable spacing unit, a centering unit, joggles for obtaining the spacer on two parts, and a fixing unit. The adjustable spacing unit comprises an interchangeable spacer against which a support captivates the parts of the housing. Each part of the housing comprises an interior side, where an interior of the housing is connected to a rolling wheel. The joggles are formed on interior side of the each part. The centering unit comprises a multi-point, which is projected on the two parts of the housing. The fixing unit comprises a fixing screw whose head support captivates the parts of the housing and body is connected through the bore. The body of the fixing screw is screwed in threaded bores.
