Abstract (en)  
[origin: WO2008009488A1] The invention relates to a device for the insertion of attenuation incisions into film or skin (24) containing a cutting knife (12) and a support (18) arranged across from the cutting knife, wherein the film or skin can be placed between the support and the cutting knife, the film or skin is braced against the support, and the cutting knife is movable relative to the film or skin. In order to ensure a defined residual wall thickness, the invention proposes that the distance between the cutting knife and the support, in the direction of the cutting axis (19), can be designed to be kept constant by a device.
