Abstract (en)  
[origin: WO2008012320A1] Use of a Fischer-Tropsch derived fuel component, in a fuel composition, for one or more of the purposes of : reducing the tendency of the composition to dissolve metals; increasing its thermal stability; reducing the concentration of a metal deactivator, antioxidant or detergent additive in the composition; or increasing the storage stability of the composition. The composition is preferably a diesel fuel composition.
