Abstract (en)
[origin: US2010005751A1] Substructure for a construction that is self-supporting without the substructure and use of the substructure. The invention relates to a substructure for a construction that is self-supporting without the substructure, which construction has at least one carrying component accommodating at least one force, wherein the substructure can be arranged relative to the construction in such a way that it is located at least partly in direct proximity to the at least one carrying component, accommodating at least one force, of the construction. The invention also relates to the use of the substructure as an underpinning structure or as a reinforcement for the construction.
