Abstract (en)

[origin: WO2008034548A2] To create a container for cooling and/or cold storage of foods and/or beverages, comprising at least one storage tank for a multiphase, flowable coolant, in which a maximally uniform cooling is also achieved throughout the entire height of the storage tank after long-term storage of the multiphase, flowable coolant in the storage tanks, the invention proposes subdividing the storage tank into multiple storage tank segments, separated from one another by partition walls running horizontally, or at an angle to the vertical.
