Abstract (en)
[origin: DE202006011918U1] Hinge arrangement comprises two pivoting elements (1, 2) joined together using a common coupling element (7) and pivoting a pivoting axis defined by the coupling element. The coupling element is built into the hinge arrangement and can be removed. The coupling element has a securing element (9) which interacts with one of the pivoting elements and fixes the coupling element in the hinge arrangement in the direction of the pivoting axis. Independent claims are also included for the following: (1) Sighting device for a weapon with the above hinge arrangement; and (2) Weapon with the sighting device. Preferred Features: The securing element is spring-loaded on one pivoting element. The securing element is formed as a spring element.
