Abstract (en)

[origin: EP2047924A2] The safety barrier, along the sides of roads and traffic lanes, is a box profile (P') with a rectangular cross section on a longitudinal axis (x). It is shaped by the surfaces (W', W'') of two tools (60, 70) from a flat sheet, with two sections (A, E) and a transit section (V) between them to give the edges (K-K'') of the box profile. The edges of both sections are in parallel and over each other at the transit.
