Abstract (en)
[origin: EP2047974A1] The roller arrangement comprises two rollers, which are rotatably stored in carrier blocks (2,3). An adjusting unit (1) is provided between the carrier blocks at both sides of the rollers, by which the rollers are adjustable to each other in its axial distance (AS). The adjusting unit comprises multiple distance blocks (101a,101b), which have different heights (H) from each other. The distance blocks are arranged on a common adjusting plate (100).
