Abstract (en)
Consists of a telescopic arm (8, 9) which is fixed to a rotating base (2) by means of a second shaft (7) on which the arm can tilt up and down, whereby the second shaft can be used to fixed the arm in a selected vertical position. The rotating platform (2) is disposed on a first shaft (5) which can be used to fix the rotating base (2) in position by means of a nut (6). The end of the telescopic arm (9) is provided with means for fixing hooks (16) on which mooring lines (18, 19, 30) can be suspended. The structure enables the tip of the telescopic arm (9) to be placed in any position selected by the user depending on the dimensions of the vessel (23) such that the mooring lines can be accessed without leaving the vessel.
