Abstract (en)

[origin: EP2048100A1] The method involves pressing a contact collar (4) with an application pressure at a reel (6), and determining a reel core (5) with an independent application pressure. The contact collar is shifted away from its reference-position correspondingly through the retained contact with the reel by a radius of the reel that differs from the reference radius. An independent claim is included for a coiler for the execution of the manufacturing method.
